

GooPageSpeed

GooPageSpeed (Google pagespeed) für Contao

Beschleunigen Sie die Ladezeit Ihrer Contao Seite durch Auslagern der externen Dateien (Bilder, Skripte, CSS) auf Subdomains.

Mit dieser Erweiterung lässt sich für jede Contao Seite eine eigene Domain mit 3 Subdomains definieren, von denen dann die Dateien folgender Verzeichnissen geladen werden:

tl_files/
system/
plugins/

GooPageSpeed definiert ein gemeinsames Präfix für 3 durchnummerierte Subdomains von domain.com (z.B. s1.domain.com, s2.domain.com, s3.domain.com).

Bevor Sie PageSpeed aktivieren, müssen Sie diese Subdomains korrekt konfigurieren und deren Erreichbarkeit sicherstellen! Alle Subdomains müssen auf Ihre Contao-Installation leiten.

Sie finden [GooPageSpeed im Contao Extension Repository](#).

The screenshot shows the configuration interface for the GooPageSpeed extension. At the top, there is a dropdown menu labeled 'Page Speed'. Below it, there are two input fields: 'Domainname' with the value 'domain.com' and 'Präfix für Subdomains' with the value 's'. Under the 'Domainname' field, there is a note: 'Diese Domain für Subdomains verwenden.' Under the 'Präfix für Subdomains' field, there is a note: 'Erzeugt ein gemeinsames Präfix für 3 durchnummerierte'. At the bottom, there is a checkbox labeled 'Page Speed aktivieren' which is currently unchecked.
